VECTOR
WORK ASSURED

Water Recycling

**Water recycling system* on the
Vector 2100 Plus**

SAVES WATER

- ✓ Reuses water already in the sewer for cleaning
- ✓ Can eliminate the use of clean water for cleaning sewer lines

INCREASES PRODUCTIVITY UP TO 100%

- ✓ Clean more lines in less time
- ✓ Allows uninterrupted line cleaning

**The Vector 2100 Plus* water recycling system,
proven to save thousands of gallons of clean water
in every shift, includes these unique features:**

- ABSOLUTE water filtration to 100 micron particle sizes - ELIMINATES most abrasive particles to protect the water pump, hoses, nozzles, and the sewer lines
- 5-Stage filtration system – system uniquely combines settling, centrifugal separation, and absolute filtration to 100 micron**
- Simultaneous operation – Recycles water while cleaning lines
- Stainless Steel construction – All valves, filters, screens, and piping on the recycling system are stainless steel
- Self-Cleaning – The absolute classification filter is continuously cleaned automatically (continued)

1621 South Illinois Street • Streator, IL 61364 U.S.A. • (815) 672-3171 Phone • (815) 672-2779 Fax

A Closer Look.

- Simple to operate – System is highly automated to allow operator to focus on cleaning lines
- NO moving parts in the body or tanks
- NEVER a need to enter a body or tank to maintain the system components
- Uses the proven Vector Jet-Rodder pump – The large diameter, slow moving jet rodder pump handles dirty water better than high speed pumps

*Available on Vector 2100 Plus with Positive Displacement Blower as optional equipment

** 100 micron is 100 micrometers which equals .004 inches. This is the average diameter of a strand of human hair, or the approximate thickness of a coat of paint.

Water Recycling System

1 Initial Separation – Natural settling in the body.

2 Coarse Screen Filter – Divides the debris body and prevents larger solids from entering stage 3.

3 Centrifugal Separation – High velocity water centrifugally separates heavier solids.

4 Absolute Classification Filter – Eliminates all particles larger than 100 micron to prevent abrasive solids in the jetting system.

5 Final Settling – Stainless steel reservoir feeds our exclusive JetRodder[®] Pump
